

1. Now that you have installed Python, let's do a short exercise. This assignment is **not graded**; its purpose is to prepare you for harder content and to connect you with help resources if needed.

1 / 1 point

Here is your task:

1. Install Python and a programming text editor.
2. Write a program that prints one line other than "hello world."
3. Take two screenshots:
 - a. your text editor showing the code, and
 - b. your command line showing the command you ran and the program's output.

You should use the command line to execute the Python program you wrote in the text editor. Please **do not** use the IDLE Python Shell, the Python Interpreter (>>>), or a shortcut in your text editor to run the code.

Later in the class, when we start reading files, we will need to run Python programs from particular directories. See the videos for details.

Were you able to successfully complete this task?

- ☒ Yes
- ☐ No

✔ Nice work

Nice work! You're ready to move on to the next lesson.
