

1. Which function can be used to convert a string into an integer in Python?

1 / 1 point

- ☐ chr()
- ☒ int()
- ☐ str()
- ☐ float()

🟢 Nice work

Congratulations! The int() function is used to convert strings to integers in Python.

2. Which of the following is used to denote a block of code in Python?

1 / 1 point

- ☒ Indentation
- ☐ Curly braces {}
- ☐ Parentheses ()
- ☐ Square brackets []

🟢 Nice work

Well done! Indentation is used to denote blocks of code in Python, which is a bit different from other languages.

3. Which of the following are valid ways to create a string in Python. (select all that apply)

1 / 1 point

- ☐ <Hello, World!>
- ☐ Hello, World!
- ☒ "Hello, World!"

🟢 Nice work

Good job! Double quotes can be used for strings in Python.

- ☒ 'Hello, World!'

🟢 Nice work

Correct! Single quotes can also be used to define strings in Python.

4. Which of the following are valid variable names in Python. (select all that apply)

1 / 1 point

- ☒ _myVariable

🟢 Nice work

Good choice! Variable names can start with an underscore.

- ☒ variable_name

🟢 Nice work

Correct! Using underscores is a common practice for variable names in Python.

- ☒ myVariable

🟢 Nice work

Well done! CamelCase is acceptable for variable names in Python.

- ☐ 2ndVariable
- ☐ my-variable
