

1. Which of the following is a comment in Python?

1 / 1 point

- ☐ // This is a test
- ☒ # This is a test
- ☐ * This is a test
- ☐ /* This is a test */

✔ Nice work

Correct! In Python, comments are created using the # symbol. Everything following # on that line is considered a comment.

2. What does the following code print out?

1 / 1 point

```
1 print("123" + "abc")
```

- Select the correct option.
- ☒ 123abc
- ☐ hello world
- ☐ This is a syntax error because you cannot add strings
- ☐ 123+abc

✔ Nice work

Correct! The + operator concatenates the two strings, resulting in the output "123abc".

3. Which of the following is a bad Python variable name?

1 / 1 point

- Select the correct option.
- ☐ spam23
- ☐ spam_23
- ☐ Spam
- ☒ spam.23

✔ Nice work

Correct! Variable names cannot contain a period (.), making spam.23 an invalid name.

4. Which of the following is not a Python reserved word?

1 / 1 point

- Select the correct option.
- ☒ spam
- ☐ break
- ☐ continue
- ☐ for

✔ Nice work

Correct! 'spam' is not a reserved word in Python.

5. Assume the variable x has been initialized to an integer value (e.g., x = 3). What does the following statement do?

1 / 1 point

```
1 x = x + 2
```

- Select the correct option.
- ☐ This would fail as it is a syntax error
- ☐ Increase the speed of the program by a factor of 2
- ☐ Exit the program
- ☒ Retrieve the current value for x, add two to it, and put the sum back into x

✔ Nice work

Correct! The statement updates the value of x by adding 2 to its current value.

6. Which of the following elements of a mathematical expression in Python is evaluated first?

1 / 1 point

- Select the correct option.
- ☐ Subtraction -
- ☐ Multiplication *
- ☐ Addition +
- ☒ Parentheses ()

✔ Nice work

Correct! In Python, operations within parentheses are evaluated first according to the rules of precedence.

7. What is the value of the following expression

1 / 1 point

```
1 42 % 10
```

- Hint - the "%" is the remainder operator
- Select the correct option.
- ☒ 2
- ☐ 4210
- ☐ 10
- ☐ 0.42

✔ Nice work

Correct! The % operator gives the remainder of the division of 42 by 10, which is 2.

8. What will be the value of x after the following statement executes:

1 / 1 point

```
1 x = 1 + 2 * 3 - 8 / 4
```

- Select the correct option.
- ☒ 5.0
- ☐ 4
- ☐ 2.0
- ☐ 8

✔ Nice work

Correct! The expression evaluates as 1 + (2 * 3) - (8 / 4), resulting in 1 + 6 - 2, which equals 5.0. The result of division in Python 3 is always a float.

9. What will be the value of x when the following statement is executed:

1 / 1 point

```
1 x = int(98.6)
```

- ☐ 99
- ☒ 98
- ☐ 6
- ☐ 100

✔ Nice work

Correct! The int() function converts 98.6 to the integer 98, truncating the decimal part.

10. What does the Python input() function do?

1 / 1 point

- ☒ Pause the program and read data from the user.
- ☐ Connect to the network and retrieve a web page.
- ☐ Read the memory of the running program.
- ☐ Take a screenshot from an area of the screen.

✔ Nice work

Correct! The input() function pauses program execution and reads data input by the user.
