

5.2 Write a program that repeatedly prompts a user for integer numbers until the user enters 'done'. Once 'done' is entered, print out the largest and smallest of the numbers. If the user enters anything other than a valid number catch it with a try/except and put out an appropriate message and ignore the number. Enter 7, 2, bob, 10, and 4 and match the output below.

Grade updated on server.

```
1 largest = None
2 smallest = None
3 while True:
4     num = input("Enter a number:")
5     if num == "done":
6         break
7     try:
8         num = int(num)
9     except:
10        print("Invalid input")
11        continue
12    if largest is None:
13        largest = num
14    elif num > largest:
15        largest = num
16    if smallest is None:
17        smallest = num
18    elif num < smallest:
19        smallest = num
20 print("Maximum is", largest)
21 print("Minimum is", smallest)
```

Your Output

```
Invalid input
Maximum is 10
Minimum is 2
```

Desired Output

```
Invalid input
Maximum is 10
Minimum is 2
```
