

6.5 Write code using `find()` and string slicing (see section 6.10) to extract the number at the end of the line below. Convert the extracted value to a floating point number and print it out.

Check Code**Reset Code**

Grade updated on server.

```
1 text = "X-DSPAM-Confidence: 0.8475"
2 text1 = text.find(":")
3 text2 = (text[text1+1:])
4 text3 = float(text2)
5 print(text3)
```

Your Output

0.8475

Desired Output

0.8475
