1 / 1 point

```
1 stuff = dict()
2 print(stuff['candy'])
```

 Nice work

4. What would the following Python code print out?

1 / 1 point

```
1 stuff = dict()
2 print(stuff.get('candy',-1))
```

 Nice work

5. What is a common use of Python dictionaries in a program?

1 / 1 point

 Nice work

6. Which of the following lines of Python is equivalent to the following sequence of statements assuming that counts is a dictionary?

1 / 1 point

```
1 if key in counts:
2     counts[key] = counts[key] + 1
3 else:
4     counts[key] = 1
```

 Nice work

7. In the following Python, what does the for loop iterate through?

1 / 1 point

```
1 x = dict()
2 ...
3 for y in x :
4     ...
```

 Nice work

8. Which method in a dictionary object gives you a list of the values in the dictionary?

1 / 1 point

 Nice work

9. What is the purpose of the second parameter of the get() method for Python dictionaries?

1 / 1 point

 Nice work
