

1. What is the difference between a Python tuple and Python list?

1 / 1 point

 Nice work

2. Which of the following methods work both in Python lists and Python tuples?

1 / 1 point

 Nice work

3. What will end up in the variable y after this code is executed?

1 / 1 point

```
1 x, y = 3, 4
```

 Nice work

4. In the following Python code, what will end up in the variable y?

1 / 1 point

```
1 x = { 'chuck' : 1, 'fred' : 42, 'jan': 100}
2 y = x.items()
```

 Nice work

5. Which of the following tuples is greater than x in the following Python sequence?

1 / 1 point

```
1 x = (5, 1, 3)
2 if ??? > x :
3     ...
```

 Nice work

6. What does the following Python code accomplish, assuming the c is a non-empty dictionary?

1 / 1 point

```
1 tmp = list()
2 for k, v in c.items() :
3     tmp.append( (v, k) )
```

 Nice work

7. If the variable data is a Python list, how do we sort it in reverse order?

1 / 1 point

 Nice work

8. Using the following tuple, how would you print 'Wed'?

1 / 1 point

```
1 days = ('Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', 'Sun')
```

 Nice work

9. In the following Python loop, why are there two iteration variables (k and v)?

1 / 1 point

```
1 c = {'a':10, 'b':1, 'c':22}
2 for k, v in c.items() :
3     ...
```

 Nice work

10. Given that Python lists and Python tuples are quite similar - when might you prefer to use a tuple over a list?

1 / 1 point

 Nice work
